

Abstract

Description of the invention

5 The invention relates to a signal processing unit, in particular for  
a telecommunication system, comprising means for digital signal  
processing, means for storage of data and control means, whereby the  
means for digital signal processing and the control means are con-  
nected to each other by means of serial time multiplex connections.

10

A signal processing unit with particularly wide applications, in  
particular for signal processing tasks in digital communication sys-  
tems, is thus achieved.
